

DevOps – Emerging critical element of Agile methods

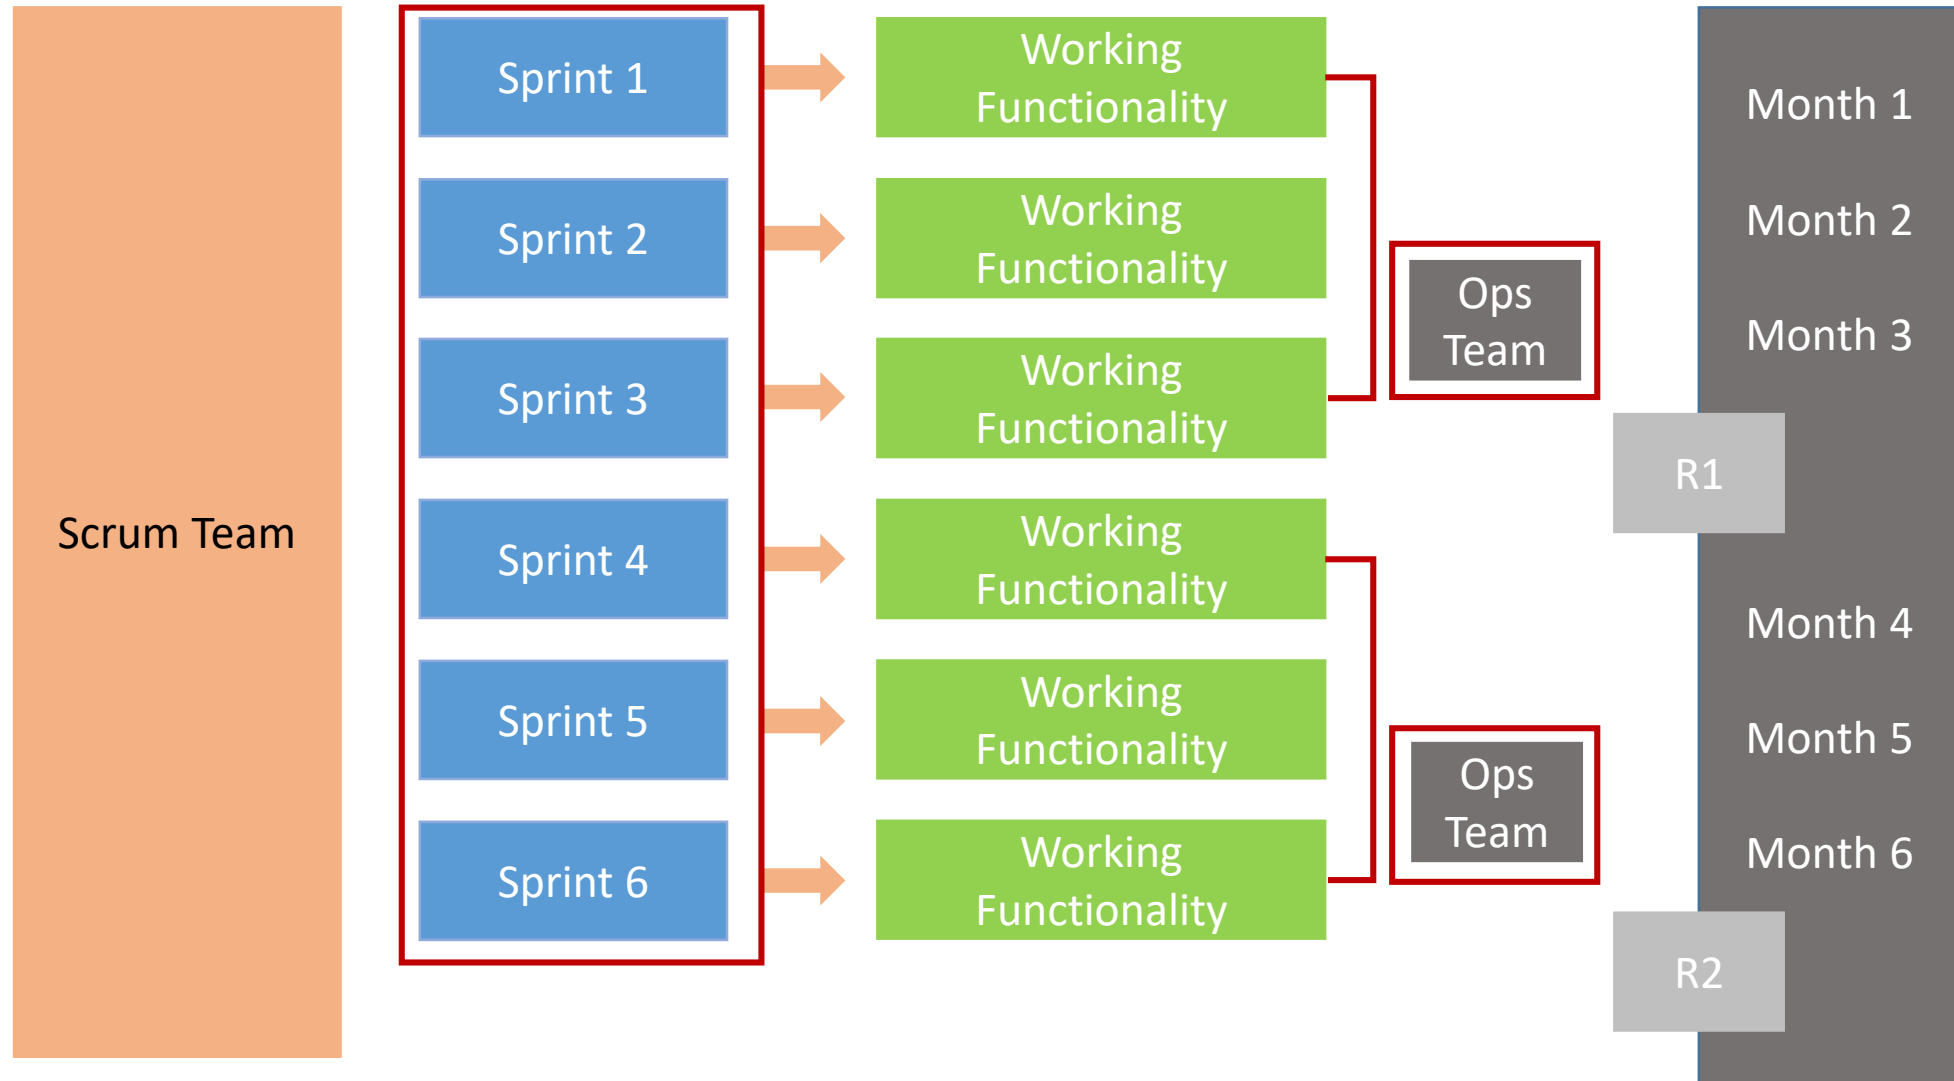

How and Why DevOps Works?

Agile team develop functionality and create value for the business

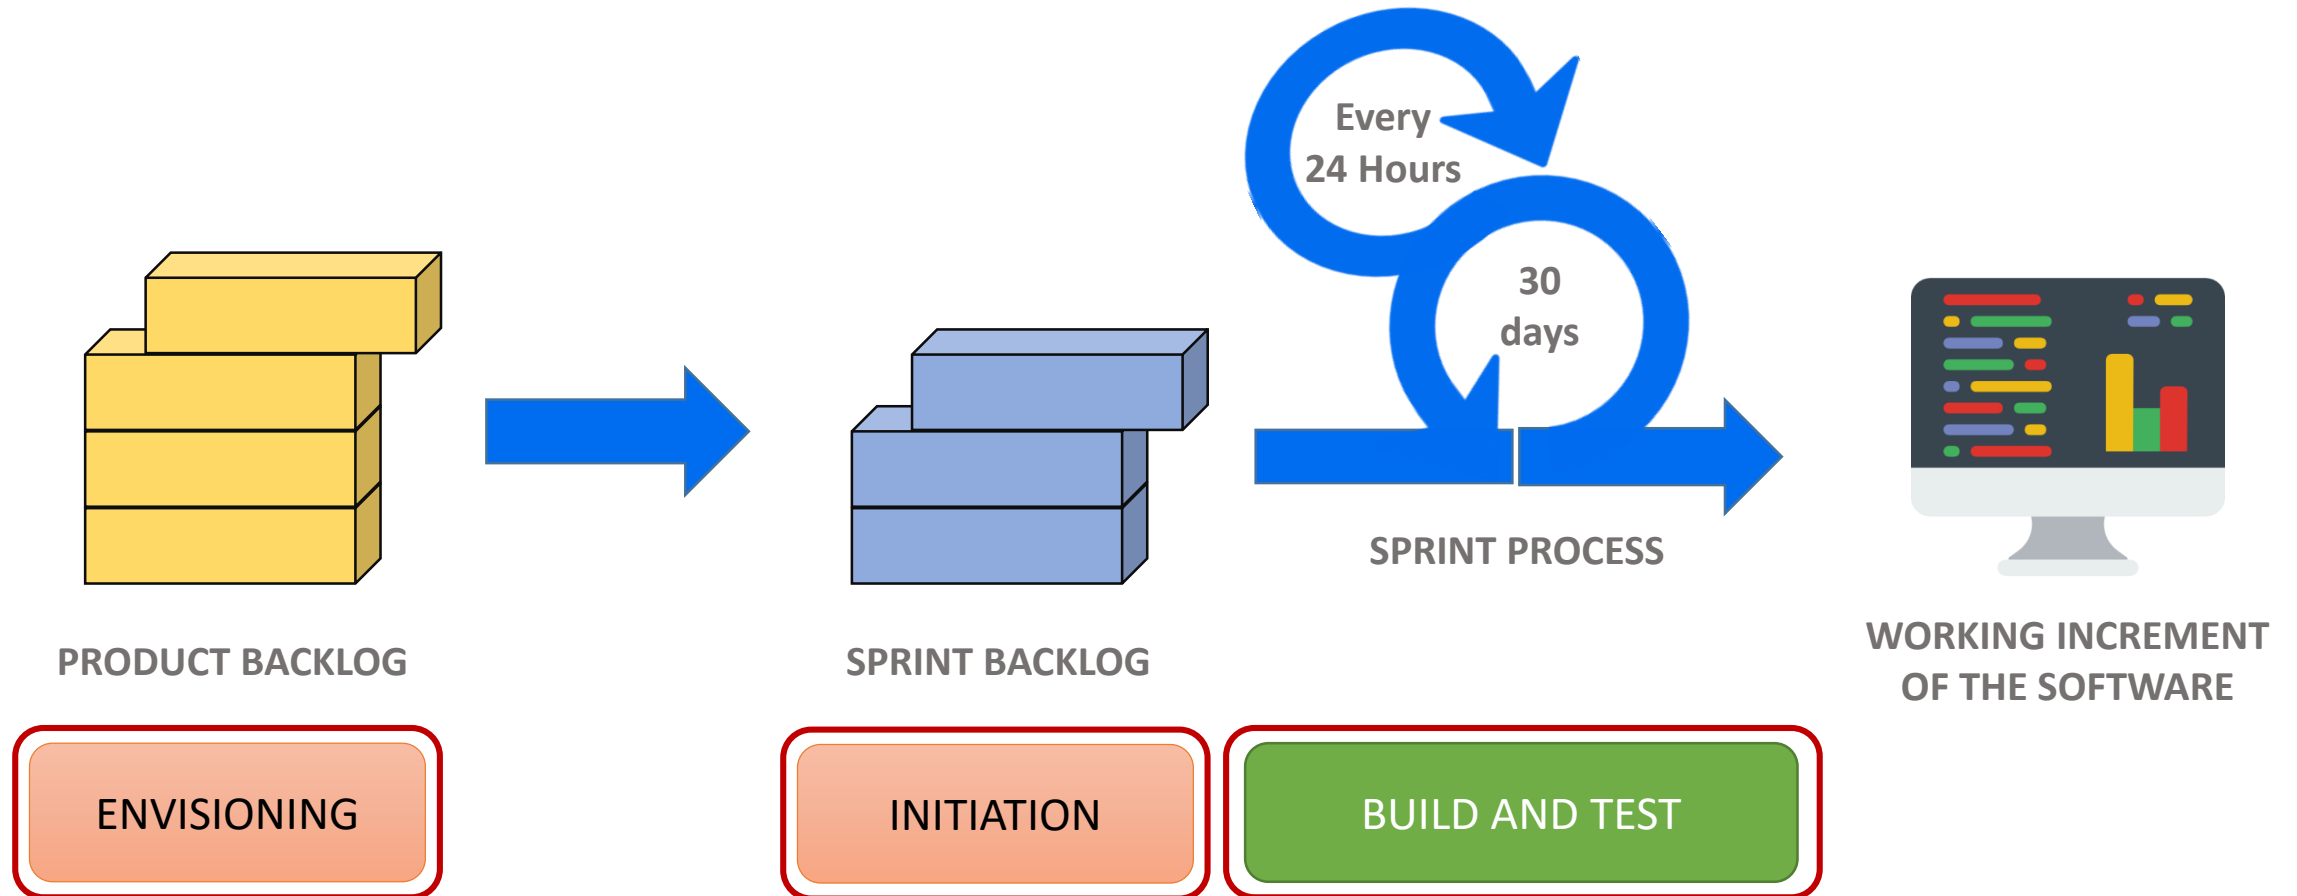

Operations teams take over functionality from development team

When functionality is deployed into production – Business value realized

DevOps

DevOps

DevOps

- ✓ Science of moving code from one environment to another in automated fashion and efficient manner – like moving code from development to testing, to staging, to production in automated mode.
- ✓ Without strong support from DevOps, Agile teams cannot be successful
