

An Iterative Adoption Process

Agile transition in an organization can be managed in the following ways:

Choose The Right Pilot Project

Choose the Right Pilot Project for Adopting Scrum

A project should neither be too small, short or irrelevant, nor be too large, long or too critical

Expectation Management

Set the right expectations for Agile

Scrum teams should be willing to encounter a few challenges in the Agile approach

Expectation Management

Complaints

Teams

Time spent in meetings, planning & reviews

Testers

Testing intermediate, unfinished items

Star Performers

Worry about focus shifting from them

Old School

Little documentation is produced & system failure effects

Customers

Time spent explaining requirements, providing feedback

Whole Team Responsibility
