

Scrum Team – Attributes

- ✓ Small and Nimble - team size should be no less than 3 and no more than 9. Exceptions are possible but uncommon.
- ✓ Self-sufficient and Cross-functional - Team members should be generalizing specialist.
- ✓ Self-organizing and Autonomous - The team decides in collaboration with the product owner the project direction and the pros and cons of different approaches

Scrum Team Deciding – Factors

- ✓ Feature team over Component team - It's best to avoid putting all of the UI developers or API developers together because each feature of stories requires both - the UI and services.
- ✓ Assemble the right people – It's important to select the right mix of people in the team. The right level of technical and domain expertise are to be selected.
- ✓ Distributed Team – May be unavoidable.
